Restriction to one of the following inventions is required under 35 U.S.C. § 121:

- I. Claims 61-85, drawn to control of evaporator pressure regulators, classified in Class 62, subclass 217.
- II. Claims 86-89, drawn to compressor capacity control, classified in Class 62, subclass 228.3.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, the invention in Group I as recited in claim 61 has separate utility such as in a system that does not have the sensor assembly providing refrigeration case temperature and evaporator regulator valve position data for determining cooling demand of Group II and the invention in Group II as recited in claim 86 has separate utility such as in a system that does not have the control system that operates one of more of the evaporator pressure regulators at approximately fully open of Group I. See M.P.E.P. § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and the search for each group is not required for the other groups restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement is traversed.
